

Anders Nilsson holds MSc in Engineering Physics from University of Lund, Sweden and Dr.Tech. in Sound and Vibration from Chalmers University in Sweden. Anders Nilsson has worked on problems relating to the propagation of sonic booms at Boeing Co., Seattle , USA. Later he moved to Norway and the Research Division of Det Norske Veritas. At Det Norske Veritas he later became head of the Acoustics Department at the Research Division. At Veritas Anders Nilsson worked on the propagation of structure borne sound in large built up structures like ships and on the excitation of plates from flow and cavitation. Anders Nilsson was head of the Danish Acoustical Institute for four years. His main activities in Denmark was building acoustics. In 1987 Anders Nilsson was appointed professor of Applied Acoustics at KTH in Stockholm, Sweden. He was also the head of the Department of Vehicle Engineering and the founder and head, until 2002, of the Marcus Wallenberg Laboratory of Sound and Vibration Research (MWL). Anders Nilsson has been a guest professor at James Cook University, Australia, INSA-Lyon, France and the Institute of Acoustics, Chinese Academy of Sciences in Beijing. He is together with Liu Bilong the author of the book Vibro-Acoustics, the first volume published in 2012 and the second in early 2013 and the third in 2014. Anders Nilsson is since 2008 professor emeritus at MWL, KTH and has participated in approximately twenty EU projects. His main interests are problems relating to energy flow in large structures, acoustic and dynamic properties of composite structures as well as vehicle acoustics.
