LUIGI COLOMBO
Vice Rector of the Piacenza Territorial
Campus, Politecnico di Milano

Luigi Colombo

Vice Rector of the Piacenza Territorial Campus, Politecnico di Milano

Luigi Pietro Maria Colombo is Vice Rector of the Piacenza Territorial Campus and Full Professor of Industrial Thermal Engineering at the Department of Energy of Politecnico di Milano.

Throughout his academic career, he has developed extensive scientific expertise in energy engineering, with a particular focus on single- and two-phase thermo-fluid dynamics and advanced experimental methodologies for the investigation of heat transfer phenomena.

He heads the Multiphase Thermo-Fluids Laboratory at the Department of Energy.

He has held numerous academic leadership and management positions, contributing to the development of teaching activities, quality assurance, and the coordination of both the Energy Engineering degree programme and the PhD Programme in Energy and Nuclear Science and Technology. He also serves on the Executive Board of the Italian Association of Thermal Engineering, where he is responsible for education and professional training initiatives.

Vision

The University's Territorial Campuses serve as strategic hubs for the development of the Schools' educational programmes while providing a direct link between the Departments' research activities and their local communities.

The Piacenza Territorial Campus is a centre for research and applied innovation, where multidisciplinary projects are developed in close connection with the local context. It plays a leading role in supporting and strengthening collaboration with the region's economic and industrial stakeholders.

The University's presence within the local community is reflected in a broad network of partnerships with municipal, provincial and regional institutions. Through these collaborations, the Campus promotes shared projects, cultural initiatives and events, while fostering the advancement of education and research.

The experience developed over the years has enabled the Piacenza Territorial Campus to establish an internationally recognised profile in the fields of landscape, energy and innovative manufacturing. By integrating education, research and scientific engagement with local institutions and stakeholders, the Campus contributes to the sustainable development and competitiveness of the territory.
