Research Title (and research sub-programme):

Methodologies for power flow control and power quality improvement in railway applications
Analysis of power supply infrastructures in railway systems

Research programme description:

The research aims to study new methodologies for power flow control and power quality improvement in railway, subway and tramway power systems. To this end, suitable algorithms will be defined for the study of these systems in the presence of bidirectional and non-reversible substations. Furthermore, new structures of electronic power converters and their control strategies will be defined in order to improve the quality of the energy supplied to the trains throughout their journey and at the same time reduce the impact on the mains both for medium and high voltage grids. Both direct current and alternating current systems will be studied.

Starting and implementation of the research programme:

The research activities will be carried out at the Politecnico di Milano or other European universities or research centers that are partners of the Politecnico di Milano in common research projects.

The collaboration and support of companies operating in the railways, metropolitan and tramway transport sectors may, in some cases, help the research activities.

Participation in national and international conferences may also be required for the presentation of publications related to the aim of the research activities.

Activities that the Temporary Research Fellow will carry out, obligations of the Temporary Research Fellow and conditions :

Analysis of classical methodologies for the study of railway electrical systems.

Analysis of the power quality requirements required by the international regulations for railway systems.

Definition of modeling and analysis methodologies suitable for the study of railway electrical systems.
